You are Claude Code. Build a working full-stack prototype for an AI-enabled Government Procurement Intelligence System for the Andhra Pradesh RTGS Hackathon.

The product combines two hackathon themes:
1. Procure Smart: AI-enabled procurement process management system
2. TenderEase: AI-based bid document drafting, validation, and evaluation automation

The prototype should not look like a generic procurement dashboard. It should look like an intelligent procurement operating layer that sits on top of government eProcurement systems and helps officers draft tenders, validate RFPs, evaluate bids, manage communications, track audit logs, and learn from historical procurement cases.

Core product name:
Procure Intelligence AP

Core product idea:
Build a secure, on-premise-ready AI procurement assistant for government departments that can:
- Ingest historical tender documents
- Detect tender structure
- Extract clauses, variables, eligibility criteria, financial thresholds, forms, and evaluation rules
- Convert extracted information into a rulebook and tender knowledge graph
- Generate new tender drafts from officer inputs and approved templates
- Validate draft RFPs before publication
- Evaluate vendor bids after submission
- Compare documents, detect anomalies, and analyze corrigenda
- Draft official communication
- Maintain audit trail for every AI recommendation and officer action
- Improve future tender drafting based on officer feedback

Important realism constraint:
The AI must not claim that it can independently generate engineering-specific design, BOQ, technical specifications, drawings, quantities, or specialized scope for projects like bridges, jetties, roads, canals, buildings, ports, or irrigation works unless the department uploads approved technical inputs or selects an approved historical tender.

The system should clearly separate:
- Rulebook-derived content
- Template-derived content
- Historical tender-derived content
- Officer-provided content
- AI-suggested content

- Placeholder requiring technical approval

For technical sections, AI can structure, validate, compare, and flag missing inputs, but final engineering content must require department technical officer approval.

Tech stack:
- React + TypeScript
- Tailwind CSS
- Shadcn UI
- Local mock backend using TypeScript modules and JSON data
- No external API dependency
- Deterministic mock AI/ML functions
- Fully usable locally
- Clean government-grade UI
- Light theme
- Professional design
- Compact tables
- Clear workflow steps
- Role-based screens

Suggested folder structure:

```

  ml/
    types.ts
    sampleData.ts
    documentIngestion.ts
    sectionClassifier.ts
    clauseExtractor.ts
    criteriaExtractor.ts
    ruleGraph.ts
    tenderCompiler.ts
    preRfpValidator.ts
    bidEvaluator.ts
    corrigendumAnalyzer.ts
    similarityEngine.ts
    anomalyEngine.ts
    communicationGenerator.ts
    reportGenerator.ts
    feedbackLearning.ts
    demoPipeline.ts
  pages/
```

utils/

Main navigation:
- Dashboard
- New Procurement Case
- Document Intelligence
- Knowledge Graph
- Rulebook Manager
- Tender Drafting
- Pre-RFP Validator
- Tender Readiness Gate
- Bid Evaluation
- Corrigendum Analyzer
- Document Comparison
- Communication
- Officer Approval Queue
- Audit Trail
- Learning Dashboard
- Security & Deployment
- Demo Pipeline

Build the following modules.

MODULE 1: Landing Dashboard

Create a procurement command center.

Show cards:
- Total procurement cases
- Draft RFPs pending validation
- RFPs blocked by missing technical inputs
- Bids pending evaluation
- Cases with compliance risk
- Clarifications pending
- Average tender readiness score
- Estimated drafting time saved
- Estimated evaluation time saved

Show recent cases table:
Columns:
- Case ID
- Project name
- Department
- Procurement category

- Contract type
- Current stage
- Compliance score
- Risk level
- Pending action
- Last updated

Case statuses:
- Intake
- Document Ingestion
- Drafting
- Pre-RFP Validation
- Technical Approval Required
- Legal Review
- Finance Review
- Ready for Publication
- Published
- Bid Evaluation
- Clarification
- Award Recommended
- Closed

Show risk alerts:
- Missing technical specification
- Placeholder value unresolved
- Corrigendum not propagated
- Bid value above benchmark
- Abnormally low bid
- JV agreement missing
- Financial capacity mismatch
- Similar vendor submissions detected

MODULE 2: New Procurement Case Wizard

Create a multi-step wizard.

Step 1: Basic details
Fields:
- Department
- Project title
- Procurement category: Works, Goods, Services, Consultancy, IT System, EPC
- Contract type: EPC, Item Rate, Lump Sum, Rate Contract, QCBS, L1, Two-cover system
- Estimated contract value
- Internal benchmark value

- Project location
- Completion period
- Defect liability period
- Funding source
- Officer in charge

Step 2: Technical inputs
Fields:
- Scope of work text area
- Upload buttons:
  - Scope of Work
  - Technical Specifications
  - Design Criteria
  - BOQ
  - Drawings
  - Prior Tender
  - Procurement Guidelines
  - G.O.s
- Option to choose similar historical tender
- Show warning if technical specifications, BOQ, drawings, or design criteria are missing

Step 3: Eligibility setup
Fields:
- Bidder type: Individual, Firm, Company, JV, Consortium
- JV allowed: Yes/No
- Specialized subcontractor allowed: Yes/No
- Similar work requirement
- Minimum average annual turnover
- Available bid capacity required: Yes/No
- Net worth requirement
- Solvency certificate requirement
- Litigation history requirement
- Blacklisting declaration
- GST, PAN, ITR requirement
- EMD or bid bond amount
- Performance security

Step 4: Tender structure
Show generated tender structure:
- Cover Page
- Invitation to Tender
- Instructions to Tenderers
- Tender Data Sheet
- Evaluation and Qualification Criteria

- Tender Forms
- Schedule of Payments
- Scope of Work
- Technical Specifications
- Design Criteria
- General Requirements
- General Conditions of Contract
- Special Conditions of Contract
- Contract Forms

For each section show:
- Source type
- Completion status
- Approval required
- Missing inputs
- Risk level

Step 5: Generate draft
Show summary:
- Ready sections
- Placeholder sections
- Rulebook-derived sections
- Historical tender-derived sections
- Officer-provided sections
- Technical approval required sections

Buttons:
- Generate Tender Draft
- Save as Draft
- Run Pre-RFP Validation

MODULE 3: Document Intelligence Console

This is a key module. It should show how the ML engine works.

The officer uploads or selects documents:
- Historical tender
- Tender forms
- Schedule of payments
- Scope of work
- Technical specifications
- Design criteria
- Corrigendum
- Evaluation statement

- Procurement guidelines

Show ML pipeline steps as progress cards:
1. Document uploaded
2. Text extracted
3. Section classified
4. Clauses extracted
5. Criteria extracted
6. Forms mapped
7. Variables detected
8. Rule candidates created
9. Knowledge graph updated

For each document show:
- File name
- Document type
- Detected section type
- Confidence score
- Extracted clauses count
- Extracted criteria count
- Extracted forms count
- Placeholder values detected
- Risk flags

Create a document detail panel with tabs:
- Raw Text Preview
- Detected Sections
- Extracted Clauses
- Extracted Criteria
- Extracted Forms
- Variables
- Processing Log

Example detected variables:
- Name of Work
- Location
- Tender Notice Number
- Completion Period
- Bid Bond Amount
- Bid Validity
- Turnover Requirement
- Similar Work Value
- Available Bid Capacity Formula
- Defect Liability Period

MODULE 4: Knowledge Graph View

Create a visual or structured graph-like screen.

Show nodes:
- Documents
- Sections
- Clauses
- Evaluation criteria
- Forms
- Evidence documents
- Rules
- Variables
- Risks
- Approvals

Show relationships:
- requires
- references
- validates
- conflicts with
- changed by
- depends on
- evidence for
- must be approved by

Example graph relationships:
- Similar Work criterion requires completion certificate
- Turnover criterion requires audited financial statements
- Available Bid Capacity requires formula A*N*3-B
- JV clause requires JV agreement
- Scope of Work depends on Technical Specifications and Design Criteria
- Corrigendum changes Financial Capacity rule
- Final tender requires officer approval before publication

The graph can be represented using cards and connecting lines or a table-based graph explorer.

Include filters:
- Show only missing dependencies
- Show only critical rules
- Show only technical approval dependencies
- Show only bid evaluation dependencies

- Show only corrigendum impacts

MODULE 5: Rulebook Manager

Create a rulebook screen.

Show rule categories:
- Mandatory section rules
- Mandatory clause rules
- Required field rules
- Cross-section consistency rules
- Financial threshold rules
- Formula validation rules
- Date consistency rules
- Corrigendum propagation rules
- Document dependency rules
- Evaluation transparency rules
- eProcurement compliance rules
- Human approval rules

Each rule card should show:
- Rule name
- Rule category
- Trigger condition
- Validation logic
- Severity
- Source clause
- Related sections
- Auto-fix allowed: Yes/No
- Officer decision required: Yes/No
- Suggested fix

Include sample rules:
1. EPC works tender must include Scope of Work, Technical Specifications, Design Criteria, Schedule of Payments, GCC, SCC, and Contract Forms.
2. Technical Specifications cannot be finalized by AI without uploaded approved input or selected historical template.
3. Similar Work requirement must define project type, lookback period, value, and evidence documents.
4. Available Bid Capacity rule must include formula A*N*3-B and definitions of A, N, and B.
5. JV allowed rule must include JV agreement, lead member condition, joint and several liability, and validity through defect liability period.
6. Corrigendum change must be reflected in ITT, TDS, QR, evaluation statement, and bid evaluation rules.

7. Bid submission mode should not contradict eProcurement submission requirements.
8. Every eligibility criterion must map to a required form or evidence document.
9. AI-generated legal, financial, eligibility, or technical criteria require officer approval.
10. Abnormally low bid requires additional security calculation.

Buttons:
- Add Rule
- Edit Rule
- Disable Rule
- View Source Clause
- Test Rule on Current Tender

MODULE 6: AI Tender Drafting Workspace

Create a document drafting screen.

Layout:
- Left sidebar: Tender sections
- Center: Draft editor
- Right panel: AI suggestions, source map, validation issues, approval status

For each tender section show:
- Section completion score
- Source type
- Confidence score
- Missing variables
- Approval status
- Risk level

Source map panel:
For every paragraph or clause, show:
- Source type: rulebook, template, historical tender, officer input, AI suggestion, placeholder
- Source document
- Source section
- Confidence score
- Officer approval required
- Risk if ignored

Buttons:
- Regenerate Section
- Add Clause
- Validate Section
- Compare with Historical Tender
- Send for Technical Approval

- Send for Legal Review
- Export Draft

Sample generated sections:
- Cover Page
- ITT
- TDS
- Evaluation and Qualification Criteria
- Tender Forms Checklist
- Schedule of Payments
- Scope of Work
- Technical Specifications placeholder if missing
- Design Criteria placeholder if missing
- GCC
- SCC
- Contract Forms

Critical behavior:
If technical specifications or design criteria are missing, the section should not show as final. It should show:

“Technical Specifications require department-approved technical input. AI can structure this section and validate completeness, but cannot finalize project-specific engineering requirements without uploaded approved specifications, drawings, BOQ, or selected historical template.”

MODULE 7: Pre-RFP Validator

This is the core Procure Smart module.

Input:
- Uploaded draft RFP
- Generated tender draft
- Selected department rulebook
- Historical tender comparison

Validation checks:
- Missing sections
- Missing mandatory clauses
- Missing tender dates
- Missing EMD or bid bond
- Missing project value
- Missing completion period
- Missing eligibility criteria
- Missing technical specifications

- Missing design criteria
- Missing quality control clauses
- Missing safety clauses
- Missing environmental clauses
- Missing labour compliance clauses
- Missing dispute resolution clause
- Missing performance security
- Missing audit trail clause
- Placeholder values like XXXX, Date, Amount, Duration
- Contradiction between ITT and TDS
- Contradiction between QR and evaluation statement
- Conflict between scope and schedule of payments
- Bid validity mismatch
- Financial threshold inconsistency
- Tender value vs turnover requirement reasonableness
- Missing available bid capacity formula
- JV or consortium rules incomplete
- Required forms not mapped to qualification criteria
- Hard copy requirement conflicting with eProcurement mode
- Corrigendum changes not reflected in dependent sections
- AI-generated technical content without officer approval

Output:
- Overall compliance score out of 100
- Readiness status:
  - Ready
  - Ready with Minor Issues
  - Needs Review
  - Not Ready
- Critical issues
- Moderate issues
- Minor issues
- Auto-fixable issues
- Officer decision required
- Section-wise score
- Suggested fixes
- Impact if ignored

Buttons:
- Auto-fix Safe Items
- Assign to Technical Officer
- Assign to Legal Officer
- Assign to Finance Officer
- Generate Validation Report

- Mark Ready for Publication

MODULE 8: Tender Readiness Gate

Create a gate before publication.

Show checklist:
- Mandatory sections complete
- Required clauses present
- Technical inputs uploaded
- Design criteria approved
- Financial thresholds checked
- Eligibility criteria mapped to forms
- Corrigendum status clear
- Legal review complete
- Finance review complete
- Technical review complete
- Officer approval complete
- Audit trail complete

Status:
- Blocked
- Needs Review
- Ready for Publication

If blocked, show reason:
- Technical Specifications missing
- Placeholder values unresolved
- Financial criteria conflict
- Corrigendum not propagated
- Approval pending

Important:
Do not allow a tender to move to “Ready for Publication” if critical issues remain.

MODULE 9: Bid Submission Intake

Create a screen for uploading and parsing vendor bids.

Mock vendors:
- Vendor A
- Vendor B
- Vendor C

For each vendor show:
- Company name
- Bid amount
- Technical documents uploaded
- Financial documents uploaded
- Similar work details
- Turnover
- Net worth
- Solvency
- Bid capacity
- Litigation history
- Blacklisting status
- GST/PAN/ITR status
- JV agreement status
- Specialized subcontractor details
- EMD status
- Power of attorney
- Signed declarations
- Technical approach
- Project schedule
- Equipment list
- Quality plan
- Safety plan

Show document parsing result:
- Required documents found
- Missing documents
- Altered forms
- Unsupported claims
- Extracted financial values
- Extracted technical claims
- Confidence score

MODULE 10: Bid Evaluation Engine

Create vendor evaluation screen.

Evaluation stages:
1. Responsiveness
2. Eligibility
3. Technical qualification
4. Financial qualification
5. Commercial reasonableness
6. Red flag and anomaly review

7. Final recommendation

For each vendor show:
- Pass/fail summary
- Score by category
- Evidence found
- Evidence missing
- Red flags
- Clarification questions
- Disqualification reasons
- Officer review required
- Final recommendation

Recommendations:
- Qualified
- Disqualified
- Needs Clarification
- Technically Responsive
- Technically Non-responsive
- Financially Responsive
- Financially Non-responsive
- Award Recommended

Commercial checks:
- Compare bid amount with internal benchmark
- Flag if bid is more than 5% above internal benchmark
- Flag if bid is more than 25% below internal benchmark
- Calculate additional security:
  additionalSecurity = 75% of internalBenchmarkValue - bidAmount
- Show L1 ranking
- Show reasonableness risk

Explainability panel:
For every decision, show:
- Rule applied
- Evidence found
- Evidence missing
- Source section
- Confidence score
- Officer approval required
- Risk if ignored

MODULE 11: Corrigendum Analyzer

Create a corrigendum impact module.

Input:
- Original tender
- Corrigendum
- Final tender

Detect:
- Old clause
- New clause
- Changed criterion
- Changed value
- Impacted sections
- Whether final tender reflects the change
- Whether evaluation template reflects the change
- Whether bidders need communication
- Whether deadline extension may be needed

Show table:
- Changed item
- Original value
- Revised value
- Impacted sections
- Updated in final tender: Yes/No
- Risk level
- Officer action required

Example:
If corrigendum changes financial capacity lookback period from five years to ten years, the system should check whether ITT, QR, evaluation statement, and bid evaluation rules all use the updated value.

Buttons:
- Generate Impact Report
- Draft Corrigendum Communication
- Update Dependent Sections
- Send for Approval

MODULE 12: Document Comparison and Red Flag Engine

Create comparison tools.

Comparison types:
- Vendor A vs Vendor B

- Vendor bid vs tender form
- Draft tender vs historical tender
- Final tender vs corrigendum
- Technical proposal vs required scope
- Financial form vs extracted financial statement

Detect:
- High similarity between vendor technical proposals
- Altered tender form language
- Missing annexures
- Repeated certificate numbers
- Same language across competing bids
- Inconsistent financial figures
- Unsupported experience claims
- Solvency certificate older than allowed limit
- Bid amount anomaly
- Missing page or section

Show:
- Similarity score
- Matched text
- Repeated phrases
- Red flag severity
- Suggested officer action

MODULE 13: Communication Management

Create a module for official communication.

Communication types:
- Missing document clarification
- Technical clarification
- Financial clarification
- Corrigendum notice
- Internal technical review note
- Finance concurrence note
- Legal review note
- Bid rejection note
- Award recommendation note
- Evaluation committee summary
- Audit response note

Every generated communication should:
- Be formal

- Mention tender number
- Mention project name
- Mention specific deficiency or action
- Avoid final disqualification language unless officer-approved
- Include deadline placeholder
- Include officer approval flag

Show:
- Draft communication
- Source issue
- Linked vendor or department
- Approval status
- Sent status
- Audit trail

MODULE 14: Officer Approval Queue

Create an approval queue.

Approval categories:
- Technical approval required
- Legal approval required
- Finance approval required
- Procurement officer approval required
- Department head approval required
- Auditor review required

Items in queue:
- AI-generated technical placeholder
- Modified eligibility criterion
- Financial threshold warning
- Corrigendum impact
- Bid disqualification recommendation
- Award recommendation
- Clarification letter
- Validation report

Each item shows:
- Requested action
- Risk level
- Source module
- AI recommendation
- Reason
- Officer options:

- Approve
- Reject
- Edit
- Send Back
- Request Clarification

On action, update audit trail and feedback learning engine.

MODULE 15: Audit Trail

Create detailed audit log.

Roles:
- Procurement Officer
- Technical Evaluator
- Finance Reviewer
- Legal Reviewer
- Department Head
- Auditor
- Admin

Audit log should record:
- Document uploaded
- Document classified
- Clause extracted
- Rule created
- Tender draft generated
- Validation run
- AI recommendation generated
- Officer accepted recommendation
- Officer rejected recommendation
- Officer edited recommendation
- Technical approval given
- Legal approval given
- Finance approval given
- Bid evaluated
- Clarification generated
- Ranking changed
- Corrigendum analyzed
- Report exported

Each log entry:
- Timestamp
- User

- Role
- Action
- Module
- Before summary
- After summary
- AI involved: Yes/No
- Reason entered by officer
- Linked document or case

MODULE 16: Learning Dashboard

Create a feedback and learning screen.

Show:
- AI suggestions accepted
- AI suggestions rejected
- AI suggestions edited
- False positives marked
- Frequently missing clauses
- Frequently edited clauses
- Common rejection reasons
- Common corrigendum reasons
- Department-wise validation issues
- Rule confidence trend
- Clause confidence trend
- Template improvement suggestions

Example insights:
- “Technical Specifications missing in 42% of draft EPC tenders”
- “Available Bid Capacity formula often missing variable definitions”
- “JV clauses frequently require legal edits”
- “Solvency certificate age rule caused repeated clarifications”
- “Schedule of Payments often conflicts with scope package structure”

MODULE 17: Reports

Create report preview and export screens.

Validation report sections:
- Executive summary
- Tender readiness score
- Critical issues
- Moderate issues
- Minor issues

- Missing inputs
- Cross-section conflicts
- Financial threshold checks
- Technical approval required
- Recommended actions
- Audit trail summary

Bid evaluation report sections:
- Tender details
- Evaluation methodology
- Responsiveness summary
- Eligibility summary
- Technical qualification summary
- Financial qualification summary
- Commercial comparison
- Vendor ranking
- Clarifications required
- Disqualification reasons
- Award recommendation
- Officer approval checklist
- Audit trail

MODULE 18: Security and Deployment Readiness

Create on-premise readiness page.

Show:
- On-premise deployment
- Role-based access control
- Audit logs
- Document encryption
- Secure document storage
- API integration with eProcurement
- API integration with document management system
- English and Telugu support
- Human approval before publication
- No direct auto-award
- Configurable department rulebook
- Department-wise templates
- Model confidence and explainability
- Data retention policy
- Access logs
- Air-gapped deployment option
- Admin control over rule changes

MODULE 19: English and Telugu Support

Add language toggle:
- English
- Telugu

For prototype:
- Translate key labels
- Show Telugu summary generation for uploaded English tender
- Show bilingual clarification draft preview
- Do not translate complex legal clauses fully unless mocked

MODULE 20: Demo Pipeline

Create a one-click “Run Hackathon Demo” button.

Demo case:
Construction of Fishing Jetty on EPC basis

Demo flow:
1. Officer creates new procurement case
2. Officer selects EPC works tender
3. Officer uploads sample tender sections
4. ML engine ingests documents
5. Section classifier identifies ITT, TDS, QR, Scope, Technical Specifications, Design Criteria, GCC, SCC, Contract Forms
6. Clause extractor extracts fraud, secrecy, JV, similar work, turnover, bid capacity, solvency, EMD, performance security, and payment clauses
7. Criteria extractor creates machine-readable eligibility and evaluation criteria
8. Knowledge graph is generated
9. Rulebook is created
10. Officer generates new tender draft
11. Pre-RFP validator detects missing technical approval and placeholder values
12. Officer auto-fixes safe issues
13. Technical approval queue receives unresolved technical sections
14. Corrigendum analyzer checks one financial capacity change
15. Tender moves to Ready for Publication after approvals
16. Three vendor bids are uploaded
17. Bid evaluator scores vendors
18. Vendor B is flagged for missing JV agreement and old solvency certificate
19. Vendor C is flagged for abnormally low bid and similarity with Vendor B
20. Communication module drafts clarification letters
21. Final evaluation report is generated

22. Audit trail shows every step

Sample vendor outcomes:
Vendor A:
- Strong technical experience
- Valid EMD
- Meets turnover
- Bid amount 3% below internal benchmark
- Recommendation: Qualified

Vendor B:
- Missing JV agreement
- Solvency certificate older than allowed period
- Similar work claim unsupported
- Recommendation: Needs Clarification or Disqualified

Vendor C:
- Bid amount 30% below internal benchmark
- Basic documents present
- Additional security required
- Similar technical text as Vendor B
- Recommendation: Financial risk, clarification required

MODULE 21: Mock ML Functions to Integrate

Create and use these functions from the local ML layer:
- ingestDocument(text, metadata)
- classifySection(text)
- extractClauses(document)
- extractEvaluationCriteria(document)
- buildTenderKnowledgeGraph(documents)
- createRulebookFromKnowledgeGraph(graph)
- generateTenderDraft(input, graph, rulebook)
- validateTenderDraft(tenderDraft, rulebook, graph)
- evaluateVendorBid(tender, vendorBid, rulebook, graph)
- analyzeCorrigendum(originalTender, corrigendum, finalTender)
- compareDocuments(docA, docB)
- generateCommunication(type, context)
- generateValidationReport(validationResult)
- generateBidEvaluationReport(evaluationResults)
- updateLearningFromOfficerAction(action)
- runDemoPipeline()

Every ML output should include:

- Recommendation
- Reason
- Source document
- Source section
- Rule triggered
- Confidence score
- Officer approval required
- Risk if ignored

MODULE 22: UI Design Requirements

Use a serious government-enterprise UI.

Design principles:
- Clean
- Trustworthy
- Audit-friendly
- Not flashy
- Not startup-gimmicky
- Clear workflow
- Strong tables
- Strong status badges
- Clear risk levels
- Clear source attribution

Use:
- Sidebar navigation
- Top header with current case
- Cards for summaries
- Tables for evaluation
- Accordions for clauses
- Timeline for audit trail
- Stepper for workflow
- Badges for severity
- Modals for report preview
- Drawers for source details
- Toasts for actions

Risk colors:
- Critical: red
- Moderate: amber
- Low: blue
- Passed: green
- Pending approval: purple or neutral

MODULE 23: Sample Data Required

Create mock JSON data for:
- Procurement cases
- Users and roles
- Historical tender documents
- Tender sections
- Clause library
- Rulebook
- Knowledge graph
- Tender drafts
- Validation issues
- Corrigendum
- Vendor bids
- Bid evaluation results
- Communication records
- Audit logs
- Learning statistics

MODULE 24: Final Deliverable

Build a complete React + TypeScript prototype that runs locally.

The prototype should demonstrate:
- Document intelligence
- Tender drafting
- Rulebook validation
- Knowledge graph
- Pre-RFP validation
- Tender readiness gate
- Bid evaluation
- Corrigendum analysis
- Document comparison
- Communication drafting
- Officer approval
- Audit trail
- Learning dashboard
- Security and deployment readiness

Make sure the app is polished enough for a government hackathon demo.

The strongest demo message should be:

“Procure Intelligence AP does not replace officers. It gives them an AI-powered procurement control layer that converts historical tenders and procurement rules into structured intelligence, validates RFPs before publication, evaluates bids transparently, records every decision, and reduces procurement errors, delays, and subjectivity.”
